

And it's nearly a wrap! This is your chance to leave a message for the next AMOS generation.

You can also address the teaching team anonymously if you like.
Write notes of what worked and what didn't. What should we improve to make THIS COURSE better in the future?
Think of future student's experience!

Think of tasks, assignments, materials presented, course structure, etc..

THE PAST AND PRESENT

What went well?
What was enjoyable?

What didn't go well?
What was painful?

THE FUTURE

What do you recommend we do differently so this course can improve?

Great team-meeting AMOS grading, just in the background joined the meeting

people/ team

inner team communication

working with great minds and motivated people

industry partner

pizza party/ in person meeting

in person interaction

No final many-pages report

no exam

Too much work for so many credits

only 5 ects for POs

unclear grading

Scrum

amos requirement

scrum but inflexible..

1 week sprints

tickets only written by POs

complexity instead of effort

A BUNCH OF DELIVERABLES. I'd prefer to concentrate on other things more

organization + communication

different motivation and working style

Time management

The first few weeks were confusing for SD since there were no clear goals

+1 for POs

sprints longer than 1 week

Personal mid project feedback from the AMOS team (grading!)

better feedback loop! maybe anonymous feedback poll during mid-term

enforce in person interaction on special occasions (mid/end term release)

2 standup mails too much

Any standup mails too much

Reduce amount of deliverables, make structure more centralized.

Final presentation, all projects in main room (but less time for each)

less restriction

Preferably one-page for AMOS to get all info, not 10 different links

earlier feedback about grading

better specifying deliverables: capabilities vs homework outdated information
