

Basic User Walkthrough

A Basic User Walkthrough contains selecting an initial map, searching for an location, switching to satellite and loading the data for the position.

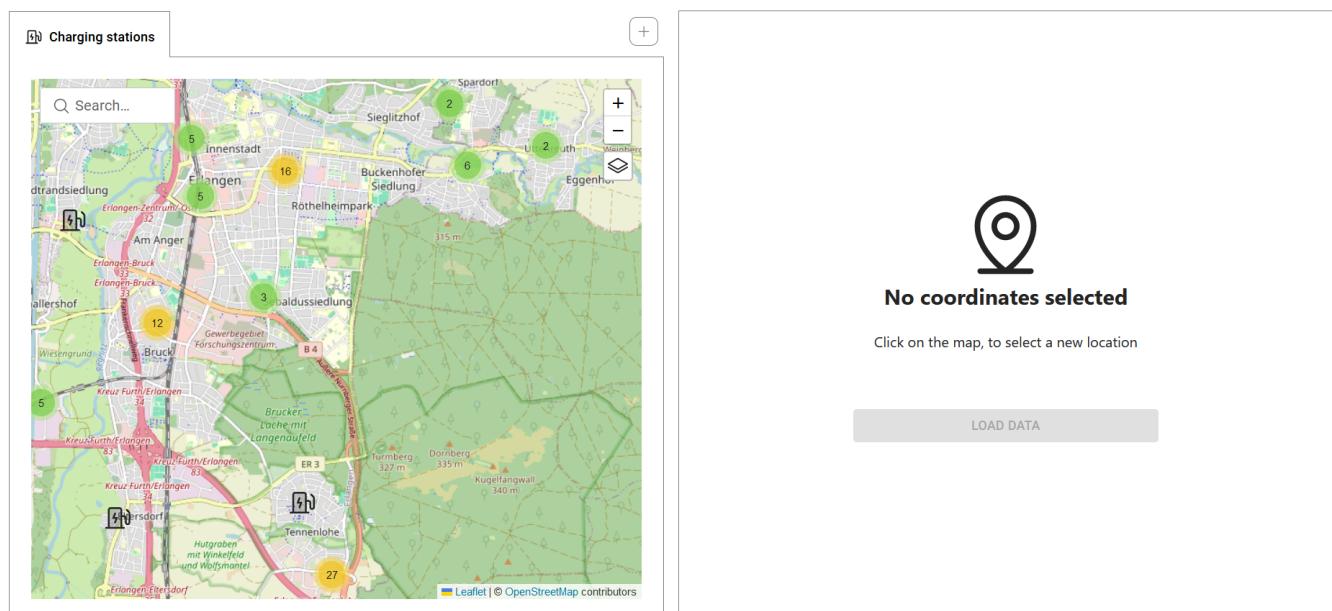

Start with selectiong initial Map

The screenshot shows the BCI Building Information Enhancer interface. At the top is the BCI logo and the text "Building Information Enhancer". Below this is a list titled "Select one of the datasets below to load it on the map". The list includes three items: "Empty Map" (description: "An empty, default map of Germany, with no data loaded."), "Charging stations" (description: "Locations of all charging stations in Germany."), and "House Footprints" (description: "Footprints for the hauses").

Created by: 

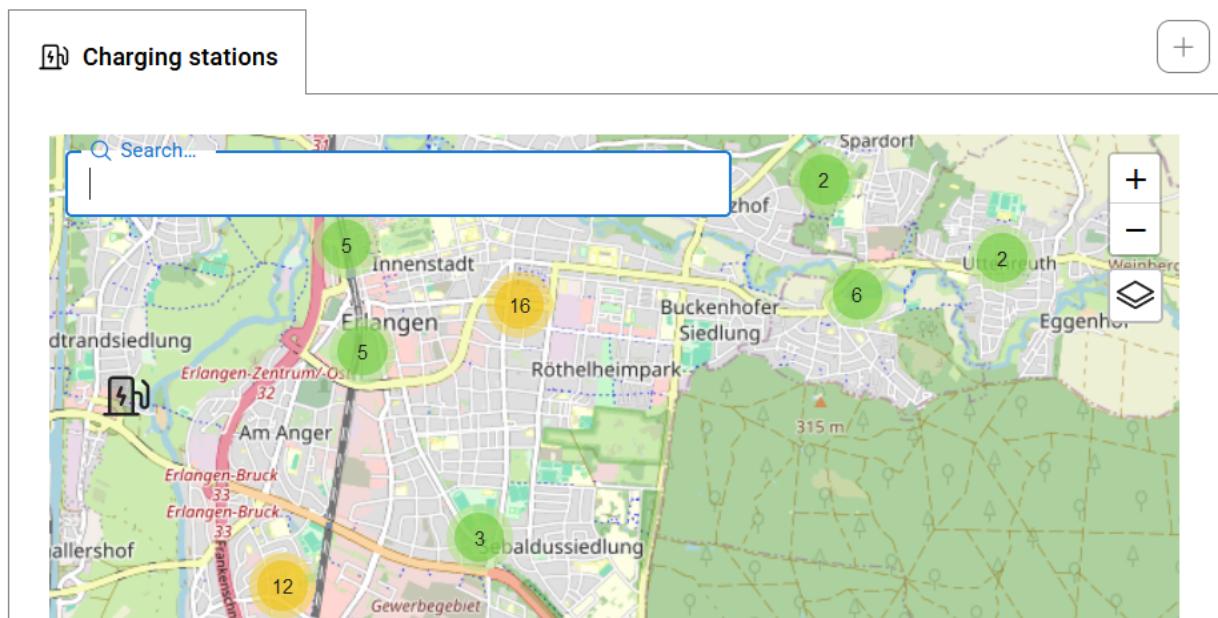

After selecting charging stations:

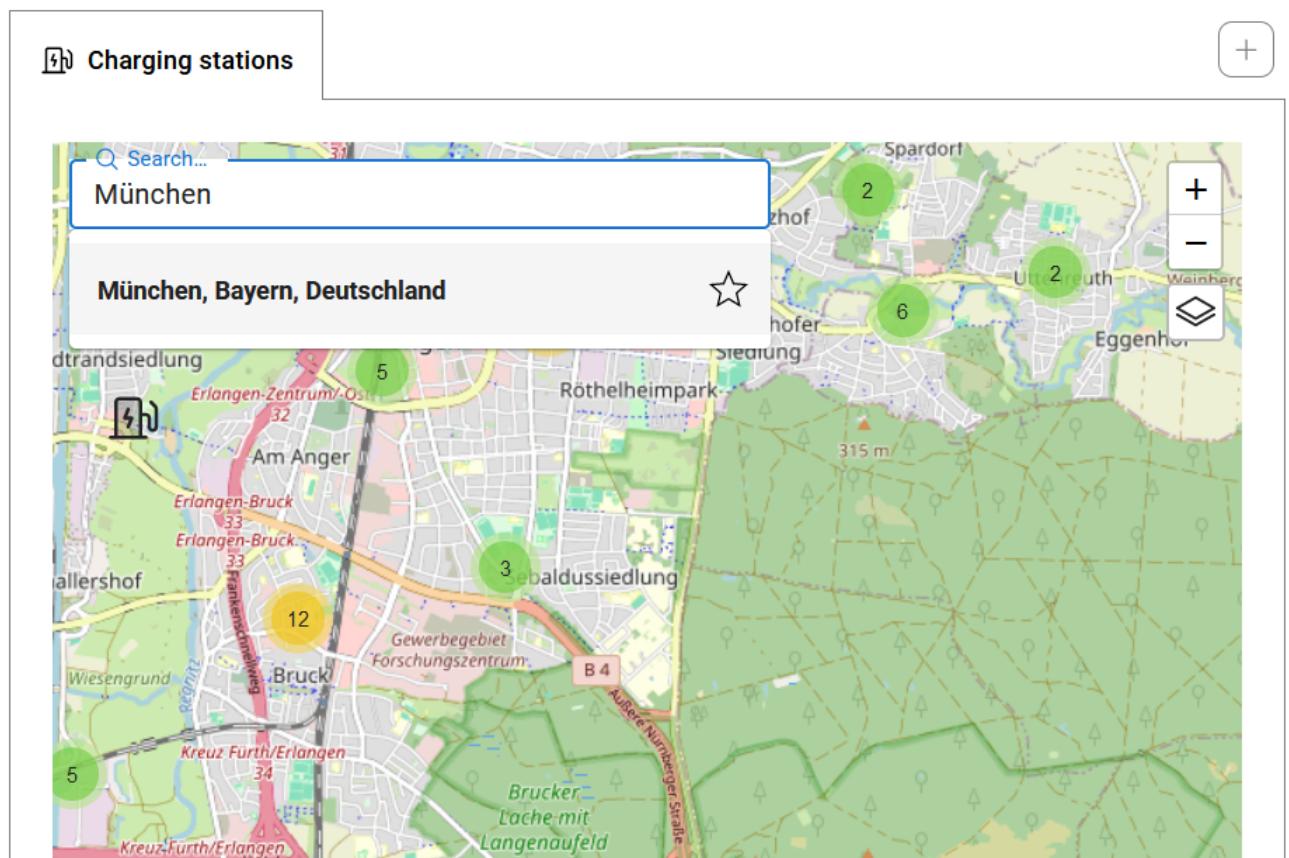

The screenshot shows the BCI interface after selecting "Charging stations". On the left is a map of Erlangen, Germany, with numerous yellow circles representing charging station locations. On the right is a panel with a location pin icon and the text "No coordinates selected". Below this is a "LOAD DATA" button and the instruction "Click on the map, to select a new location".

Search

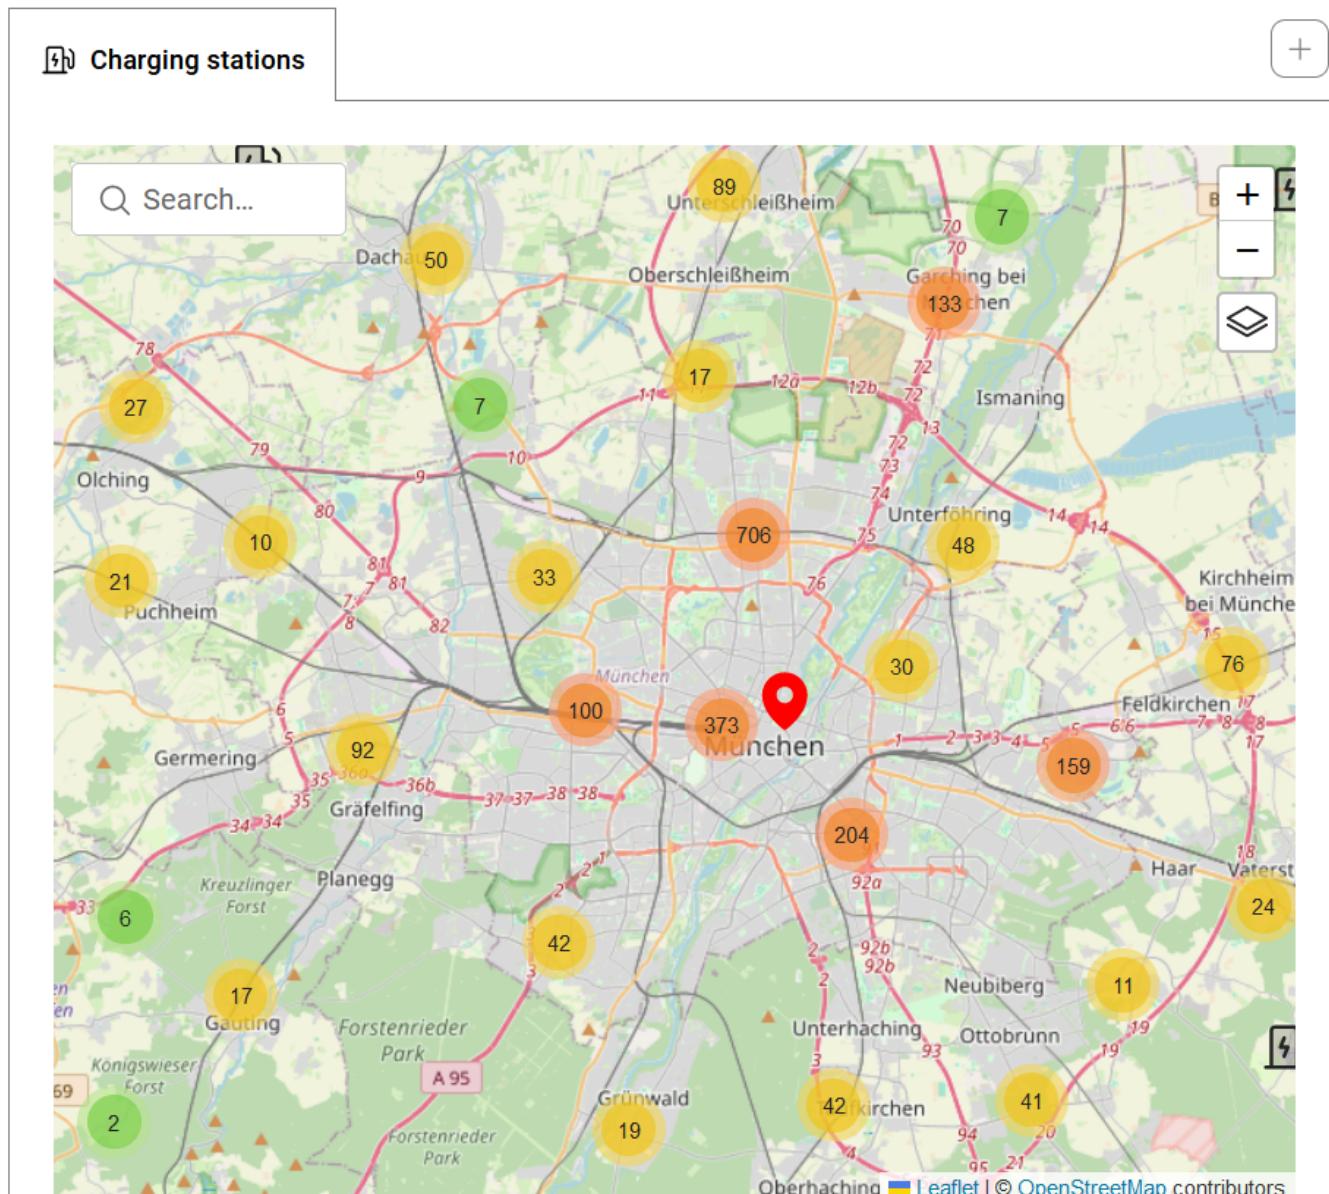

Initial

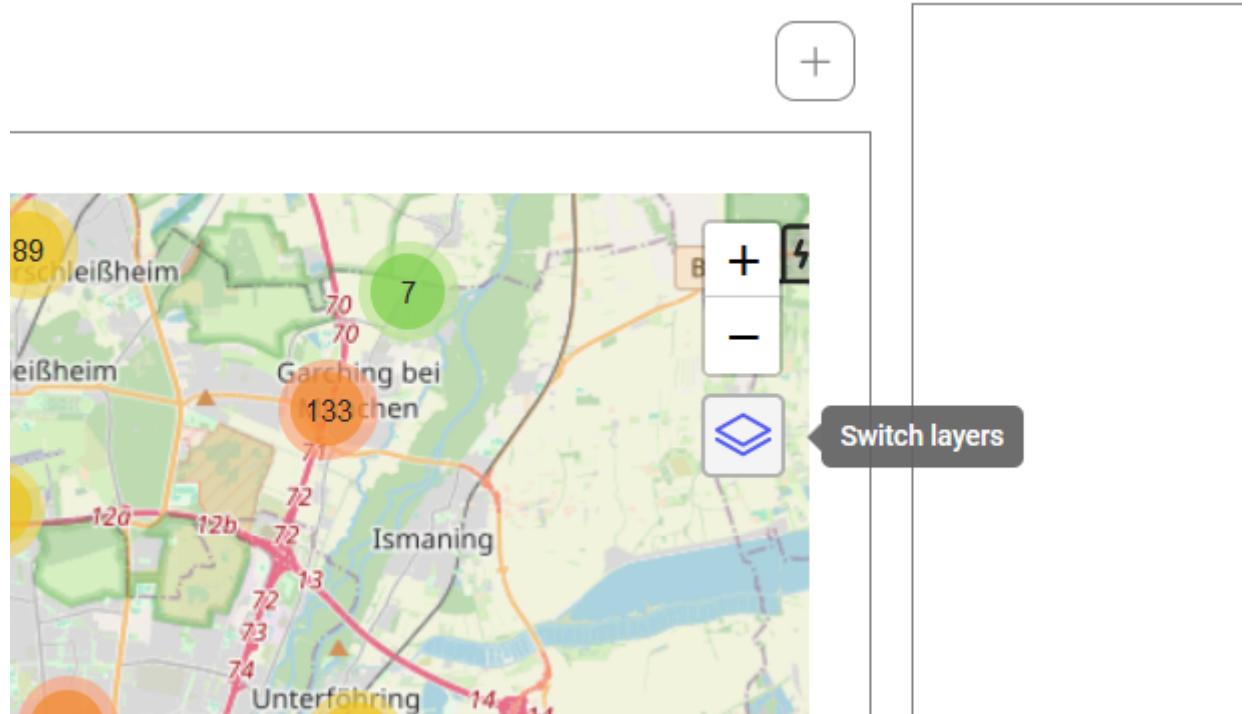

With Input and suggestions

After clicking the option the map will move to the selected location and do the zoom accordingly to the selected area.

Clicking the "Switch Layers" Button changes the background from satellite to open street map and vice versa:

Load Data

The load data button on the right side request all available data for the current marker position (red marker in the map):
